PROFESSIONAL SUMMARY

Graduate Software Engineer at **Boxfusion**, working on Shesha – an open-source low-code framework used to build production line-of-business applications. Backend-focused, with a background in physics and mathematics that shaped a first-principles approach to problem-solving. Recent work: rebuilding canvas sizing and zoom behaviour in Shesha's Form Designer, a ticket that had been reassigned twice and slipped three sprints before it reached me. Comfortable moving between individual contribution and mentoring – I've run structured project reviews and study sessions for bootcamp teams at WeThinkCode_.

PROFESSIONAL EXPERIENCE

Graduate Software Engineer

CURRENT

FEBRUARY 2026 – PRESENT

BOXFUSION

- Contribute to Shesha, an open-source low-code framework used to build production line-of-business applications
- Rebuilt canvas sizing and zoom behaviour in the Form Designer: auto-fit default, predefined zoom steps, an editable zoom field, and component wrapping that survives a zoom change
- Took on a ticket that had been reassigned twice and was three sprints late, and shipped it after requirements changed mid-way through

Peer & Bootcamp Mentor

MARCH 2025 – AUGUST 2025

WETHINKCODE_

- Coached students on study methods and coursework, running group study sessions across the cohort
- Reviewed bootcamp teams' projects against structured evaluation criteria across multiple project cycles
- Gave feedback teams could act on immediately, not just a pass/fail grade

EDUCATION

Diploma in Computer Software Engineering

2024 – 2025

WETHINKCODE_

- Intensive software development program covering Python, Java, and modern development practices
- Built through coding challenges, hackathons, and collaborative projects rather than lectures alone

Computer Science

FEBRUARY 2018 – DECEMBER 2021

UNIVERSITY OF THE WITWATERSRAND

Three years toward a Computer Science degree before leaving to pursue software development directly. Built a foundation in algorithms, software design, and analytical thinking from first principles that still shapes how I approach a system today.

CAREER OBJECTIVE

Looking to grow further into backend and platform engineering – deeper ownership of production systems, building on current work in Java, Spring Boot, and distributed systems within an open-source codebase.
